Author: B. Paton

Book title: Space Technologies, Materials and Structures (Welding and Allied Processes) (v. 2)

Pages: 592

Publisher: CRC Press; 1 edition (April 10, 2003)

Language: English

Category: Engineering

Size PDF version: 1402 kb

Size ePUB version: 1425 kb

Size FB2 version: 1900 kb

Other formats: docx doc lit mbr

Investigations in space have been conducted in both manned and unmanned space vehicles. Space: Technologies, Materials and Structures explains the development of hardware and instrumentation designed to operate in the severe conditions of space. For the operation and repair of such vehicles, engineers and scientists must consider a broad range of practical issues, such as the construction and mounting of extended large structures, discussed here using the Mir space station as a case study. Another consideration is the manufacture of permanent joins by welding and brazing, as well as the application of various coatings by thermal evaporation. Astrophysicists, engineers and applied mathematicians will benefit from this volume.
